LinkedIn: <https://cz.linkedin.com/in/robert-vokáč-081170381/>

PROFILE

C++ programmer focused on **runtime architecture, low-level platform layers, and API compatibility frameworks**.

Designed and implemented **custom replacements for XNA, DirectX 3, and WinAPI-style APIs**, enabling real-world games to run without original dependencies across Windows, Linux, Web, and Android.

Experienced in **reverse-engineering behavior, reproducing undocumented semantics, and building cross-platform abstractions over SDL3/OpenGL**.

Background in backend software engineering, now focused primarily on **C++ runtime and game technology development**.

Interested in C++ roles focused on **game technology, runtime systems, platform abstraction, or engine-related development**.

CORE PROJECTS

CNA - Cross-Platform XNA Runtime

GitHub: <https://github.com/openeggbert/cna>

Custom C++ reimplementation of the XNA 4.0 API over SDL3 (~5k LOC), validated on a fully playable game port.

- Designed **XNA-compatible runtime**: game loop, input, rendering, audio, and resource lifecycle
- Implemented **rendering abstraction** supporting SDL_Renderer, OpenGL, and bgfx backends
- Ported **Speedy Blupi (2013)** from C# / XNA to native C++
- Achieved stable builds on Windows, Linux, Web, and Android from one C++/CNA codebase
- Replaced **MonoGame/.NET/XNA** dependencies with a fully native **C++/SDL3 runtime**
- Reproduced original engine behavior **without access to original engine internals**

Playable build: <https://speedyblupi.com/SpeedyBlupi2013/>

Free Direct + Free API - DirectX 3 & WinAPI Compatibility Layer

GitHub: <https://github.com/openeggbert/free-direct> · <https://github.com/openeggbert/free-api>

Modern C++ reimplementation of DirectX 3 and a WinAPI subset over SDL3 (~6k LOC).

- Implemented **DirectDraw-style 2D rendering and WinAPI event/input handling**
- Built compatibility layer enabling execution of **legacy Windows applications without original DirectX SDK, WinAPI, or runtime dependencies**.
- Supports running:
 - **Speedy Blupi (1998/2001)** - playable compatibility
 - **Planet Blupi (1996)** - partial compatibility, actively under development

Hive - Modular Backend Platform

GitHub: <https://github.com/robertvokac/hive>

Archived 40k+ LOC modular backend platform.

- Designed **metadata-driven architecture, custom ORM, and REST generation**
- Implemented **plugin system, scheduler, triggers, and validation pipeline**

SKILLS

Languages: C++20/23 (primary), SQL

Systems & Tools: SDL3, OpenGL, CMake, Linux, Windows, MS Visual Studio basics, CLion, SQLite, Git

Core Areas:

- Runtime architecture
- API compatibility layers: XNA / DirectX / WinAPI
- Rendering and platform integration
- Abstraction design
- Legacy behavior debugging
- Cross-platform C++ development

EXPERIENCE

Software Engineer – Assist

2017 - present

- Maintained and improved production backend systems using Java and SQL
- Diagnosed and resolved production issues, improving system stability
- Applied long-term system design principles in large legacy codebases
- Developed C++ systems independently, focused on runtime and compatibility layers

Technologies: Java, SQL, Git, Bash

EDUCATION

BSc in Computer Science

Czech University of Life Sciences Prague

2014-2017

LANGUAGES

English: B2

Czech: native
